Master API Documentation

Single Source of Truth for Frontend Integration

1. Authentication & User Management

These endpoints handle the security handshake and user roles.

METHOD	ENDPOINT	DESCRIPTION
POST	/api/auth/login/	OTP Request: Sends a 6-digit code via Gmail SMTP to the user's email.
POST	/api/auth/verify/	OTP Verification: Exchanges the email + OTP for a JWT Access & Refresh token.
GET	/api/users/me/	Profile: Returns current user details, including `is_active_seller` and `is_active_broker` status.
PATCH	/api/users/update-role/	Role Selection: Allows a user to select "SELLER" or "BROKER" role before starting KYC.

2. Digital KYC (Sandbox DigiLocker)

Legally verifies user identity via Aadhaar using the Sandbox three-way handshake.

METHOD	ENDPOINT	DESCRIPTION
POST	/api/kyc/initiate/	Start KYC: Returns a `digilocker_url` and `request_id`. Redirect the user to this URL.
POST	/api/kyc/verify-status/	Finalize: Call this once the user returns. Backend fetches verified name, DOB, and address from Sandbox.

3. Property Marketplace (Public & User)

Comprehensive listing management with professional real estate attributes.

Marketplace Operations

METHOD	ENDPOINT	DESCRIPTION
GET	/api/listings/	Search/Filter: Public list of `VERIFIED` properties. Supports `?min_price=`, `?bhk=`, `?city=`, and `?search=`.
POST	/api/listings/	Add Listing: For Sellers/Brokers. Requires MultiPart form data (Images/Docs). Status defaults to `PENDING`.
GET	/api/listings/{id}/	Details: Full property data including BHK, Area, Amenities, and Lat/Long coordinates.
DELETE	/api/listings/{id}/	Remove: Deletes own property. Blocked if a `SIGNED` mandate exists.

Property Interactivity

METHOD	ENDPOINT	DESCRIPTION
POST	/api/listings/{id}/upload_image/	Gallery: Upload additional property photos to the gallery.
POST	/api/listings/{id}/save_property/	Wishlist: Toggles the "Save/Unsave" status for the user.
POST	/api/listings/{id}/record_view/	History: Adds the property to the user's "Recently Viewed" list.

4. Mandate & Agreement Flow

Handles the legal 90-day agreements between Sellers, Brokers, and the Platform.

METHOD	ENDPOINT	DESCRIPTION
POST	/api/mandates/initiate/	Create Request: Used by Seller to hire a Broker/Platform, or Broker to request a Seller.
PATCH	/api/mandates/{id}/sign/	Sign Agreement: Changes status to 'SIGNED'. Starts the 90-day timer.
GET	/api/mandates/my-mandates/	Dashboard: Returns all active, pending, and expired agreements for the user.

5. Admin Panel (Custom Dashboard)

Restricted to `is_staff=True` users for platform oversight.

Admin Property Management

METHOD	ENDPOINT	DESCRIPTION
GET	/api/admin-panel/properties/	Full List: View every property across the entire platform (including Pending/Rejected).
POST	/api/admin-panel/properties/	Direct List: Admin creates a property. Auto-assigned to Platform Admin and status is set to 'VERIFIED'.
POST	/api/admin-panel/properties/{id}/approve/	Verify: Admin manually approves a user's pending listing.
DELETE	/api/admin-panel/properties/{id}/	Force Delete: Admin removes any property from the system.

Admin User & Analytics

METHOD	ENDPOINT	DESCRIPTION
GET	/api/admin-panel/users/	User List: View all registered users, their KYC status, and roles.
GET	/api/admin-panel/users/{id}/kyc_details/	KYC Review: Access verified Aadhaar data for audit purposes.
GET	/api/admin-panel/dashboard/stats/	Analytics: Returns platform stats (Total Users, Total Listings, Active Mandates).

Global Constants & Logic

Platform Admin ID: 18a816ee-179a-4cac-b67b-3098b2f5f3bd (Use this whenever the Platform itself is the Broker/Owner).

Currency: All prices are in INR (₹).

Area Units: All area fields (`carpet_area`, etc.) are in sq. ft.

Coordinates: Latitude and Longitude are standard float values for Map integration.

SaudaPakka Master API Documentation

This document serves as the single source of truth for the Frontend team to integrate the entire ecosystem.
